JARDIN DE VILLE - NEWS FOR 2009

Among the exciting additions for 2009, JARDIN DE VILLE is proud to present its BG1 collection, featuring a unique design that provides modern comfort. Blending the durability of aluminium frame with the elegant woven mesh fabric, this furniture comes with the most practical removable, replaceable cushion cover. (For more details, visit our site www.Jardindeville.com).

The new Terrace concept targeting the hotel and restaurant markets, was created to transform any outdoor space into an intimate outdoor lounge or dining area.

Each pavilion is equipped with a retractable roof giving the option of either an open sky or complete protection from bad weather. Manufactured with heavy-walled aluminium, the pavilion structure will withstand different weather conditions: moisture, rain, wind and sun. The roof and the curtains are manufactured with Sunbrella® fabric, composed of 100% acrylic fibres dyed in the mass. The colours are fixed in the depth of the fabric and are guaranteed not to fade for 8 years. (For more details, visit our site www.Jardindeville.com).

During 2008, JARDIN DE VILLE expanded its operations by acquiring a new 21,500 ft² building for its Cuscini Design division so as to be able to increase the production of garden shelters and do a better manage the quality control process. It is located at 12015, Arthur Sicard Street in Mirabel.

We are pleased to announce that, as of March 2009, the Mirabel showroom will be an outlet where customers will be able to find end of line and floor models whose prices will have been reduced up to 70%! Quality at very good prices!
